github.com/serbenda

Systems engineer with 20+ years in production: from 24x7 UNIX on-call to defining infrastructure as code on AWS, Azure and private cloud. I design and run automation platforms (Terraform Enterprise, Packer, Ansible) and help development teams ship faster with less risk. Master's in Blockchain, with the winning project of its edition.

20+ years in systems | **12,000-server farm** | **AWS · Azure · private cloud** | **🏆 Best project, Master's in Blockchain**

EXPERIENCE

Automation Engineer — 2019–now

Infrastructure as code for Windows and Linux servers, on AWS, Azure and private cloud.

- I design and run Terraform Enterprise, the platform that provisions the infrastructure.
- I automate OS base images with Packer and repetitive work with Ansible, Python and Bash.
- I operate VMware, VMware Cloud and private cloud virtualisation, and move apps into Docker containers.
- I help development teams improve their CI/CD pipelines.

IT Expert · UNIX at scale — 2016–2019

Senior production UNIX administration on a 12,000-server farm.

- Designed capacity planning with OpenTSDB and Grafana.
- Designed continuous delivery on OpenStack with Rundeck and Ansible.
- Migrated servers from VMware to OpenStack and deployed workloads on IaaS.
- Built a dynamic inventory with Ansible and CMDBuild.
- Technical lead for merging several UNIX delivery teams.

Big Data Engineer — 2015–2016

Set up and secured Big Data platforms in production.

- Defined, installed and ran Cloudera and Hortonworks platforms: Hadoop, Hive, Impala, Spark and HBase, among others.
- Secured them with Kerberos integrated with LDAP, Active Directory and IPA, across several authentication systems.
- Evaluated new solutions and supported users in production.

Senior systems administrator and consultant — 2009–2015

24x7 production UNIX and Linux for a dozen clients.

- Solaris, Red Hat, SUSE, HP-UX and AIX on farms of up to 5,000 servers.
- Automated installs, validation and updates with scripts, Ansible and BladeLogic.
- High availability with Pacemaker, Corosync, HAProxy and Keepalived, plus storage, backup and web and application servers.
- Critical incidents, changes and on-call, with performance analysis and improvement proposals.

Systems technician and administrator — 2005–2009

The early years: from user support to running production systems.

- Ran HP-UX, Solaris, Tru64 and Red Hat, with EMC storage over fibre.
- Worked on transmission network projects to improve a mobile operator's coverage.
- Started out supporting hardware, software, users and networks.

SKILLS

IaC & automation
Terraform, Terraform Enterprise, Ansible, Packer, Python, Bash, CI/CD

Cloud & virtualisation
AWS, Azure, private cloud, OpenStack, VMware, Docker

Systems
Red Hat, SUSE, Solaris, AIX, HP-UX, high availability

Data & observability
Cloudera, Hortonworks, Kerberos, LDAP/AD, OpenTSDB, Grafana

Blockchain
Solidity, ERC-721, OpenZeppelin, IPFS, ethers.js

EDUCATION

Master's in Blockchain · Universidad Europea

2022–2023 · Final project FrameBlock, chosen as best project by the jury.

PROJECTS

FrameBlock 🏆

A framework to plug any application into any blockchain. Use case: NFT collections on Ethereum, BNB Chain and Polygon with IPFS and card payments.

Browser games

Six dependency-free HTML/JS games, published on bendi.dev with automated deployment and metrics.
